ICON EDITOR

Application for creating customized *SVG* icons.

The customizable icons are based on template sets where properties such as icon text content, icon size, *SVG path* and *stroke* colors, and image content can be modified. The templates come from the following sources:

- **Exelior** - Icons specially created for this application
- **Font Awesome** - Free icons provided by *Font Awesome*
- **Mapkey** - Free icons provided by *mapshakers*

To create a custom icon, first select an icon set and an icon from that set in the *Icon Template* panel. You can then specify scale and *SVG* tag style settings in the *Icon Styling* panel.

Icons holding text content have an *SVG text* tag for specifying the text value.

The *Font Awesome* droplet icon has an *SVG svg* tag for specifying the *Font Awesome* icon to include.

Customized icons are stored in sets.

To save a new icon, either select in existing set or specify a new set name in the *Customized Icon* panel. Then, enter a name for the new icon and click the **SAVE** button. **Note that this demo application saves the icons in *localStorage* only**, so the icons are available only to applications running in the browser.

To edit an already created custom icon, select set name and icon name in the *Customized Icon* panel and apply the changes in the *Icon Styling* panel before saving.

PLACE MARKER

Sample application for marking map locations with either previously created and saved custom icons or icons from the template sets available in a directory on the server.

Start out by marking a specific map location by either

- Double clicking on the desired map location
- Entering the location address in the *Address* field
- Entering the location coordinates in the *Latitude* and *Longitude* fields.
